Aptuit provides a comprehensive suite of product development services and competencies to biotechnology companies and large, fully integrated pharmaceutical companies worldwide. Our global business allows us to have expert staff on the ground where you need them, when you need them.

## PRODUCTS AND SERVICES

Our services encompass the following activities, which can be provided in a seamless continuum or in modular form:

- Regulatory and Strategic Consulting: program design, regulatory submission preparation, quality and compliance auditing, validation documentation
- Informatics: development, implementation, and maintenance of enterprise-class, mission-critical information systems for the drug

## APTUIT, INC.

### AN INNOVATIVE APPROACH:

Aptuit is a company focused on streamlining and supporting the drug development process for biotechnology and pharmaceutical innovators. We are engineering a better drug development process – delivering critical expertise, technologies, facilities, ideas, and services to our customers, in a seamless and globally integrated offering. We are the first provider to combine industry-leading drug development consulting expertise, state-of-the-art GMP/GLP facilities, innovative technologies designed specifically to expedite the development process, complete project management capabilities, and comprehensive regulatory compliance services, all in one package. Customers can select distinctive parts of the mix or an end-to-end solution. We assist clients by designing therapy or product-specific programs, leveraging our collective expertise to identify potential hurdles and address them at the onset – getting it right the first time. In addition, we offer centralized project management to navigate and manage the program for a customer's molecule as it advances from inception through clinical development. Finally, we are working to make the entire process truly transparent by establishing the industry's first seamless IT system, which will allow customers to access their data anywhere in the world, in real time.

### EXPERIENCED MANAGEMENT:

Aptuit is lead by a senior management team with the experience, technical know-how, vision, and uncompromising dedication to client service needed to bring innovation to the drug development industry. The management team guides a staff of over 2,600 people, a workforce

composed of highly experienced professionals who provide services to more than 600 pharmaceutical and biotech companies worldwide.

### RECENT DEVELOPMENTS:

Continuing the promise to engineer a better drug development process, Aptuit announced in October the acquisition of the Chemical and Pharmaceutical Development (CPD) business of Evotec, which is comprised of an active pharmaceutical ingredient (API) facility in Oxford, England and a well-established and recently-expanded parenteral (injectable vials) fill/finish facility in Glasgow, Scotland.

The acquisition provides Aptuit with an established European presence in API development services.

Following the acquisition of the CPD business, Aptuit will have 2,680 employees across 18 global facilities, including the formation of Aptuit Laurus (India)

### APTUIT LAURUS:

Based in Hyderabad, India with additional facilities in Vishakhapatnam and Bangalore, Aptuit Laurus combines the global offerings in drug development of Aptuit Inc. with Laurus Labs R&D and manufacturing expertise and newly built state-of-the-art facilities.

Aptuit Laurus comprises of Laurus' newly-established 160,000 square foot research and development facility in Hyderabad, which already employs over 200 scientific personnel; Laurus' large-scale manufacturing plant, which is currently under construction on over 34 acres of land in Pharma City, Vishakhapatnam; and Aptuit's existing Informatics Development and Support group of 100 employees in Bangalore.

development market

- Drug Product Development: formulation, analytical method development and stability testing, preformulation, novel drug delivery
- Preclinical Technologies: pharmacology, toxicology, bioanalysis, ADME
- Clinical Services: clinical supplies manufacturing, packaging and distribution in support of Phase I through

Phase IV clinical studies, support and consulting services to allow rapid implementation of proof-of-concept studies. With more than 600,000 sq. ft. of capacity and 30 international clinical distribution sites, Aptuit is the largest global provider of clinical packaging and logistics services by capacity.

- Drug Substance Development: API route development, process demonstration, scale up and supply
