Global Oncology - Full-Service CRO

PROLOGUE RESEARCH

COMPANY PROFILE:

Prologue Research, Inc., is a leading global oncology contract research organization (CRO) founded in 1998. The Company offers a full range of clinical research services for Phase I-IV international or US-based oncology trials. Prologue provides its clients with world-class experience in running oncology trials, a deeply-qualified staff, access to an extensive investigator database, and state-of-the-art computerized systems uniquely designed for complicated oncology trials. We offer experience and talent that enable more efficient product development while maintaining unparalleled quality.

Our dedication to detail and expertise in oncology sets us apart from other CROs. We take great pride in being a "niche" CRO dedicated to the

oncology field. This streamlined focus allows us to provide a level of attention to detail that others can only promise. We have never had a trial pulled due to client dissatisfaction and we are proud of our reputation as the go-to CRO for "rescue" studies. In addition, we now have working relationships with global experts in clinical trial management, enabling the successful, seamless completion of large international oncology studies

To date, Prologue has provided support to nearly 100 trials treating over 18,500 patients at more than 650 sites from a database of over 12,000 investigators.

Tom Ludlam
President & CEO

"Since our founding in 1998, Prologue has been driven by a singular vision: a belief that a deep expertise and focus solely on oncology enables us to provide an unparalleled level of service that ultimately will make a positive impact in the daily lives of people battling cancer."
