# WORLD CARE CLINICAL

## COMPANY PROFILE:

WorldCare Clinical (WCC) is a leading imaging CRO that provides end-to-end imaging services for clinical trials in the pharmaceutical, biotechnology and medical device industries. Assembling radiology teams with world-class therapeutic expertise, WCC offers centralized, independent radiology reviews in multiple modalities and disease states, a global teleradiology network that ensures the quickest, most cost-effective delivery of the highest-quality image data, and proven experience in the management of the imaging process for a fully-harmonized clinical trial. Headquartered in Cambridge, Massachusetts, WCC is part of the Cincinnati-based ProScan group of companies. An industry leader in operating freestanding diagnostic imaging centers, ProScan's global technological expertise and teleradiology capabilities enhance WCC's operational capabilities by expanding the ability to manage virtually any volume of images for clinical trials, while offering some of the most advanced imaging specialists in the world.

WCC's longstanding relationship with the Massachusetts General Hospital (MGH) Department of Radiology, and

most recently the University of Chicago Medical Center (UMMC), also enables the company to provide its clinical trial sponsors with access to sub-specialty radiologists, oncologists and pathologists who bring a wealth of experience in multiple subspecialties and modalities. To date, WCC has processed 1 million+ images, enrolled 35,000+ subjects, and served 1,500+ investigator sites in more than 48 countries. WCC is able to present clean images to any reader selected by a sponsor.

In 2007, WCC introduced WorldPro, the best and most cost-effective image collection software in the clinical trial world that dramatically drives down the costs and time associated with image transmission during clinical trials. A fully validated, customized study-specific software application with complete audit trail, centralized database, and image management tracker, WorldPro is designed to track the receipt and processing of images for qualitative and quantitative review by independent sub-specialty radiologists, and allows sponsors to view every step of the trial from their own locations. As the technological key to WCC's world-class imaging services, it provides for the complete harmonization and security of the trial process like never before.

## PRODUCTS AND SERVICES

### Complete Imaging Trial Management

- Project management and support
- Protocol and imaging charter design
- Site qualification, start-up, and management
- Quality control system designed for regulatory compliance
- Quantitative/qualitative analysis and consulting
- Technology and database management systems
- FDA imaging review and submission support
- Web-based reporting

### Expertise Highlights

- Therapeutic Experience. Pre-eminent radiologists at MGH, UCMC and WCC have extensive therapeutic expertise in multiple disease states.

With access to independent physician readers and 15+ in-house radiologists, WCC provides tremendous expertise and scalability, which allows for the effective management of clinical trials of all sizes.

- Modality Expertise. Board-certified radiologists at MGH and WCC have a breadth of experience in every major modality used in clinical trials for the development of therapeutic compounds and medical devices.
- Operational Excellence. WCC offers end-to-end clinical trial imaging services, from protocol design through data delivery. A highly trained staff, rigorous quality assurance and control processes, and proactive project management help to accommodate

a high volume of images and quality data.

- Innovative Technology and Workflow. Central image management system WorldPro relies on state-of-the-art imaging technology, the most sophisticated and extensive teleradiology network in the industry, and pioneering workflow processes from parent company ProScan, resulting in the most efficient throughput and highest-quality data delivered at the lowest possible cost.
- Proven Experience with Regulatory Bodies. WCC has a proven record of successfully managing and submitting clinical trial imaging data to regulatory authorities.
